DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claim 1 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 1 of prior U.S. Patent No. 6,640,116. This is a double patenting rejection.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawamura et al. (cited by Applicant), Chaney, Tanton et al., and Grisham et al. teach various arrangements for determining optical related parameters rotation of a sample that include a polarized light source, a magnetic field generator, and a polarimeter. However, none of these references teach or suggest applying the magnetic field to tissue and analyzing the polarimeter output to compute an output corresponding to a mean pathlength estimate of the tissue portion. Madrasaz et al. (cited by Applicant), Kuhls, and Kaplan teach optical measurement arrangements for performing measurements from a subject's tissue that include illuminating the tissue with polarized light and determining optical rotation of light that has propagated through the tissue, but do not include a magnetic field generator in their arrangements.
